This is a research project on inventory control procedures using Emenite Limited as a case study of manufacturing company.

This study is necessitated by the fact that many manufacturing firms can no longer meet up to installed capacity due to poor management of inventories. This has led to closing down of various companies or retrenchment of workers due to lean pockets. Therefore in this project, I am at critically examining the inventory control procedures of Emenite limited with the view that some other manufacturing companies in Enugu will learn from its success.

To solve the problem, both primary and secondary data were collected by using questionnaires, oral interviews of staff and personal observations. And in organizing the data, taxes and percentages were used.

The interpretation of the findings provide that Emenite Limited is a successful manufacturing company whose firm inventory control policies vitally ensures its success, and that other manufacturing companies can successes by following in the footsteps of Emenite Ltd.
