CHAPTER ONE

1.0 INTRODUCTION

1.1 BACKGROUND OF THE STUDY

Liquidity of banks is “the case with which banks assets could easily be converted into cash”. The liquid asset include cash in bank vaults, and other government securities that have not been used as collateral for loans. The most liquid of all these assets is cash.

These are many reasons why a bank should have reasonable liquid assets in its assets portfolio. These includes amongst othersto babble the bank to meet prompt demands from deposits and to ensure that thebank main trained public confidence and also beadle to utilize profitableopportunities that may come out in future.

However, it should be mentioned that bankslike most other business are profit oriented. They operate in order to makeprofit for their shareholders. The profits could duly be realized only if thereis adequate deposits from bank customers. The deposits will not come unless thedepositors could be assured of the safety of their deposits and for the safetyof the deposit to be assured, these has to be enough liquidity in the bank.

Conversely, a bank operates in order to make profitfor her shareholders. It is a known fact that action designed to make profit inbanks may bring about bank distress and vice versa. Therefore, equilibrium has to be sought between the two. These taken extreme cases, have been the constantconcerns of bank management.
